Learning Opportunity

In this engaging, educational and resource-filled institute, teachers will learn how to do it! They will see how to create standards-based small group lessons that rock, workshop management strategies that work, and assessment tools that inform instruction! Dr. Nicki will teach about managing flexible groups, matching activities to students, incorporating the 4 must have workstations and using technology throughout the workshop.

In terms of fluency, we will look at how to reinforce the different aspects such as flexibility, efficiency and strategic competence. Also, we will discuss word problems and the many ways to teach them. Much of our discussion will be based on 3 of Dr. Nicki's books, *Guided Math in Action*, *Math Running Records (A Framework for Fluency)* *Problem Solving in Action*. Join us to find out how to unlock the power of guided math today!

****This learning opportunity is being provided through funding from Alberta Education****

Presenters

Dr. Nicki Newton

Dr. Nicki Newton is an education consultant who works with schools and districts around the country on elementary math curriculum (including best practices, guided math and math centers) as well as curriculum mapping. She has taught elementary school, middle school, and graduate school. Having spent several years as a bilingual teacher and staff developer, she has an extensive background in Sheltered Instruction and English Language Learner Strategies. She uses her strong understanding of curriculum to address the differentiated needs of all students in her work with teachers and administrators.
