Program

Project-based learning can encourage creativity, innovation and collaboration. It can also accommodate a variety of learning styles and strengths. However, if we're not careful, project-based learning can become more about the project and less about the learning!

By focusing on learner outcomes and putting assessment front and centre, project-based learning can be an accurate and motivating way to meet curricular goals while actively engaging students. Keep the focus where it needs to be - on learning.

This learning opportunity is made possible through funding from Alberta Education.

Presenters

Pat Lore

Pat Lore has many years of experience as a classroom teacher with Edmonton Public Schools and has a life-long interest in mathematics education. She has worked with teachers and administrators as a consultant with EPSB and the

Edmonton Regional Learning Consortium, and with pre-service education students as sessional lecturer at the University of Alberta. Her interest in assessment in mathematics, and its power to move student learning forward, led her to a secondment this year with the Alberta Assessment Consortium, where she is currently working as a field services facilitator and developing mathematics performance assessment tasks for the website.
