Program

Are you a secondary general science, biology or chemistry teacher who would like to experience cutting-edge scientific research at the University of Lethbridge and get to know some new and exciting inquiry-based learning activities, labs and resources for your science classroom?

GlycoNet is a consortium of Canadian carbohydrate research laboratories that has partnered with CMASTE at the University of Lethbridge to allow practicing science teachers to work with leading-edge scientists in their labs during the summer to produce high-quality, curriculum-linked activities and resources for use in Alberta high school science classrooms. In order to facilitate the use of these resources, the carbohydrate research lab at the U of L invites you to visit their facilities, meet their scientists and try out these new and exciting, locally developed resources.

This workshop will include:

- half day visit to the carbohydrate research laboratory at the University of Lethbridge
- half day hands-on experience with some of the resources available

This learning opportunity is provided free of cost for participants through a grant from the National Research Centres of Excellence Canada

Presenters

Quinn McCashin

Resource Developer (CMASTE)

Dr. Wade Abbott

Adjunct Professor in the Department of Chemistry and Biochemistry at the University of Lethbridge, Research Scientist at Agriculture and Agri-food Canada.

Registration Notes

Lunch and refreshments provided
